Although Microsoft also offers a version of AutoCAD for Windows, AutoCAD is typically sold as a standalone product. Besides its core functionality, AutoCAD offers the following extras, which may be paid for: Windows-based CADDocking feature to create a full view of your workspace from any task pane. The Docking feature allows you to view the same document in multiple panels and is useful for merging and linking multiple files in a single drawing. AutoCAD is a native Windows 10 application, and by default it opens and runs in the new Windows 10 Metro UI, which works differently than the old Windows 8 and Windows 7 UI. This means you can't use the old Windows desktop as the primary view for your work. Although the new Metro UI is easier to navigate, the traditional Windows desktop provides a full view of your document and its accompanying toolbars, so it's better for performing common tasks. For example, if you want to copy a block, you still need to use the standard menu (F2). Unlike traditional Windows apps, AutoCAD uses a windowless UI design, meaning that you can't use the Alt+Tab or Windows 10 window switcher to switch between windows and workspaces. Screen-capture support, which provides automatic screen capture of your AutoCAD session. Also known as smart screenshot or screencast, this feature allows you to save the active screen as a.JPG,.PNG, or.BMP file for later viewing and sharing. When you save your screen shot, it's saved as a.JPG file (for photos and web graphics), a.PNG (for line art) file, or a.BMP file (for graphics in 2D applications like AutoCAD or Photoshop). Feature-rich help support, which allows you to search within AutoCAD or send help requests to Autodesk technical support. Standalone, desktop versions of AutoCAD, including AutoCAD LT, which is primarily used for drafting and annotation. A feature called "AutoTrace" that allows you to automatically track the path of objects or lines drawn on a drawing and create a.DWG file (a subset of the.DWF format) representing this path. A feature called DWF/DWX that allows you to export drawings in the.DWF and.DWX formats (also known as the drawing exchange format). DWF is the native format for AutoCAD, and

Thyroid nodules are common in systemic lupus erythematosus (SLE). The etiology is usually considered to be immunologic. However, molecular biology studies of thyroid nodules have identified some genes in SLE patients with nodules. The purpose of this study was to determine whether thyroid nodules in SLE patients may be associated with genetic variants of immune response. Thirteen SLE patients with thyroid nodules were included in the study. DNA samples from peripheral blood leukocytes were analyzed using SNP genotyping method (microarray SNP genotyping method) to detect the presence of single nucleotide polymorphism in genes associated with immune response. The results of the study showed no significant difference in the genotype or allele frequencies of the studied genes in SLE patients with thyroid nodules as compared with healthy controls. These results indicate that the genotype distribution of the studied genes in SLE patients with thyroid nodules does not deviate from the expected pattern and therefore cannot be considered as a factor predisposing to thyroid nodules in SLE patients. A simplified method for testing stevia sweeteners in functional foods. Stevia sweeteners have many beneficial health effects, but few studies have investigated the effects of stevia sweeteners on the functional components of foods. The aim of this study was to investigate the effects of Stevia rebaudiana (Bertoni) Sweet (SRS) on lycopene oxidation in a variety of foods, and to confirm the safety of the SRS in terms of its ability to inhibit lycopene oxidation. The SRS was isolated from SRS extracts using an H⁺-type ion exchange resin. Lycopene was extracted from tomatoes and high-carotene carrot. Lycopene
