Pathology and surgery of german measles. III: Pathological types and clinical effects of measles. The number of measles cases which have occurred in recent years have been steadily increasing. The vast majority of cases is now under 20 years of age. Measles was almost eliminated from Germany about 15 years ago. Now, all children and adolescents are regularly and routinely vaccinated. Therefore measles has been transferred to the elderly and even adults. Pathological diagnosis of measles in adults may be difficult. Adults often report a past history of measles infection. This may be followed by an asymptomatic convalescence, or a mild form of measles. In rare cases late sequelae (e.g. myelitis, encephalitis or aseptic meningitis) can occur. A distinction between typical measles and subacute encephalitis is difficult. Measles encephalitis manifests itself by a progressive cognitive deficit, focal neurological symptoms (e.g. hemiparesis) and a combination of these symptoms. In most cases of measles encephalitis the diagnosis is made by exclusion. Mild measles can be easily recognized by the triad of maculopapular rash, adenoidal-pharyngitis and conjunctivitis. A distinction between the subacute form of measles, chronic encephalitis and chronic meningitis (suspected in adults) is of paramount importance. Since it is now known that the majority of cerebral complications (e.g. encephalitis) in adults (and also in infants) are due to measles infection, the diagnosis of measles encephalitis is mandatory. The treatment of measles in adults differs from the treatment of measles in children. Q: I need a way to delay my timer interval for a few seconds I am creating a pong game for android using java. I also have an object which i can use the move function for. How do I set up an if statement which will have the object move every few seconds for 20 seconds. A: this is an example of how you can do something like that, using a TimerTask. you are basically looping the TimerTask with a Thread.sleep call. the TimerTask will call the do() method when called on the Timer, and i would think you can handle the onTick stuff if you want. this is where you should put your move logic, depending on your needs. class MyTimerTask extends Timer
